

Alarm Analysis Made Easy

CareSight is an advanced reporting and analytics system that provides both real-time and historical clinical alarm analysis for use by departmental managers and key executives of hospitals and health systems. These tools help hospitals maximize the information trapped in various technologies to improve patient care, optimize safety, and streamline workflows.

CareSight extracts and transforms data collected from nurse call, patient monitoring, and alarm management middleware systems. This information is presented in an easy to navigate dashboard that enables any number of views, and/or custom reports that are clear, easy to configure, and automatically routed to key personnel.

CareSight Arms You with the Data You Need to:

- Spotlight areas that align with hospital improvement initiatives
- Identify the key data to support those initiatives
- Highlight where response times can be improved and noise can be reduced
- Illuminate ways to improve patient and staff satisfactions

Analytics to Improve Patient Care

Analyze data across a wide variety of systems

Get a broader view of your environment, identify correlating events across units and monitor staff performance. CareSight seamlessly integrates with Vocera, Rauland-Borg, Connexall, Ascom, Critical Alert Systems, Phillips patient monitoring, and more delivering a comprehensive reporting solution.

Our cost effective solution allows you to maximize your investments in your existing infrastructure. CareSight gives you the power to get better insight across multiple platforms, providing the details to efficiently monitor patient activity in a way that is concise, clear, and easy to understand.

Data Aggregation and Reporting

CareSight easily digests, classifies, and summarizes alarm activity. Need to look at a different date range, nursing unit, or alarm type? CareSight puts those controls at your fingertips. Quickly visualize your new results on screen or download and share via email, Excel or PowerPoint. Make intelligent, data-driven alarm management decisions--without the need for a database administrator, the creation of spreadsheets, or crunching mountains of data. Whether you use the information for daily huddles or as part of a larger HCAHPS or workflow improvement initiative, CareSight enables data-driven decisions.

Interactive Decision Support

CareSight's interactive data modelers are fed in real time so that critical care nurses, biomedical engineers, and nursing informaticists alike can:

- Change staffing movements to positively impact patient care
- Eliminate false patient alarm notifications in compliance with NPSG #6
- Analyze hourly rounding and nurse responsiveness
- Develop the most efficient notification workflow

Up-to-Date KPIs

CareSight automatically updates patient monitoring key performance indicators (KPIs) in real time, giving users immediate answers to essential alarm- and patient-monitor related questions regarding alarm types, grades, thresholds, durations, and more.

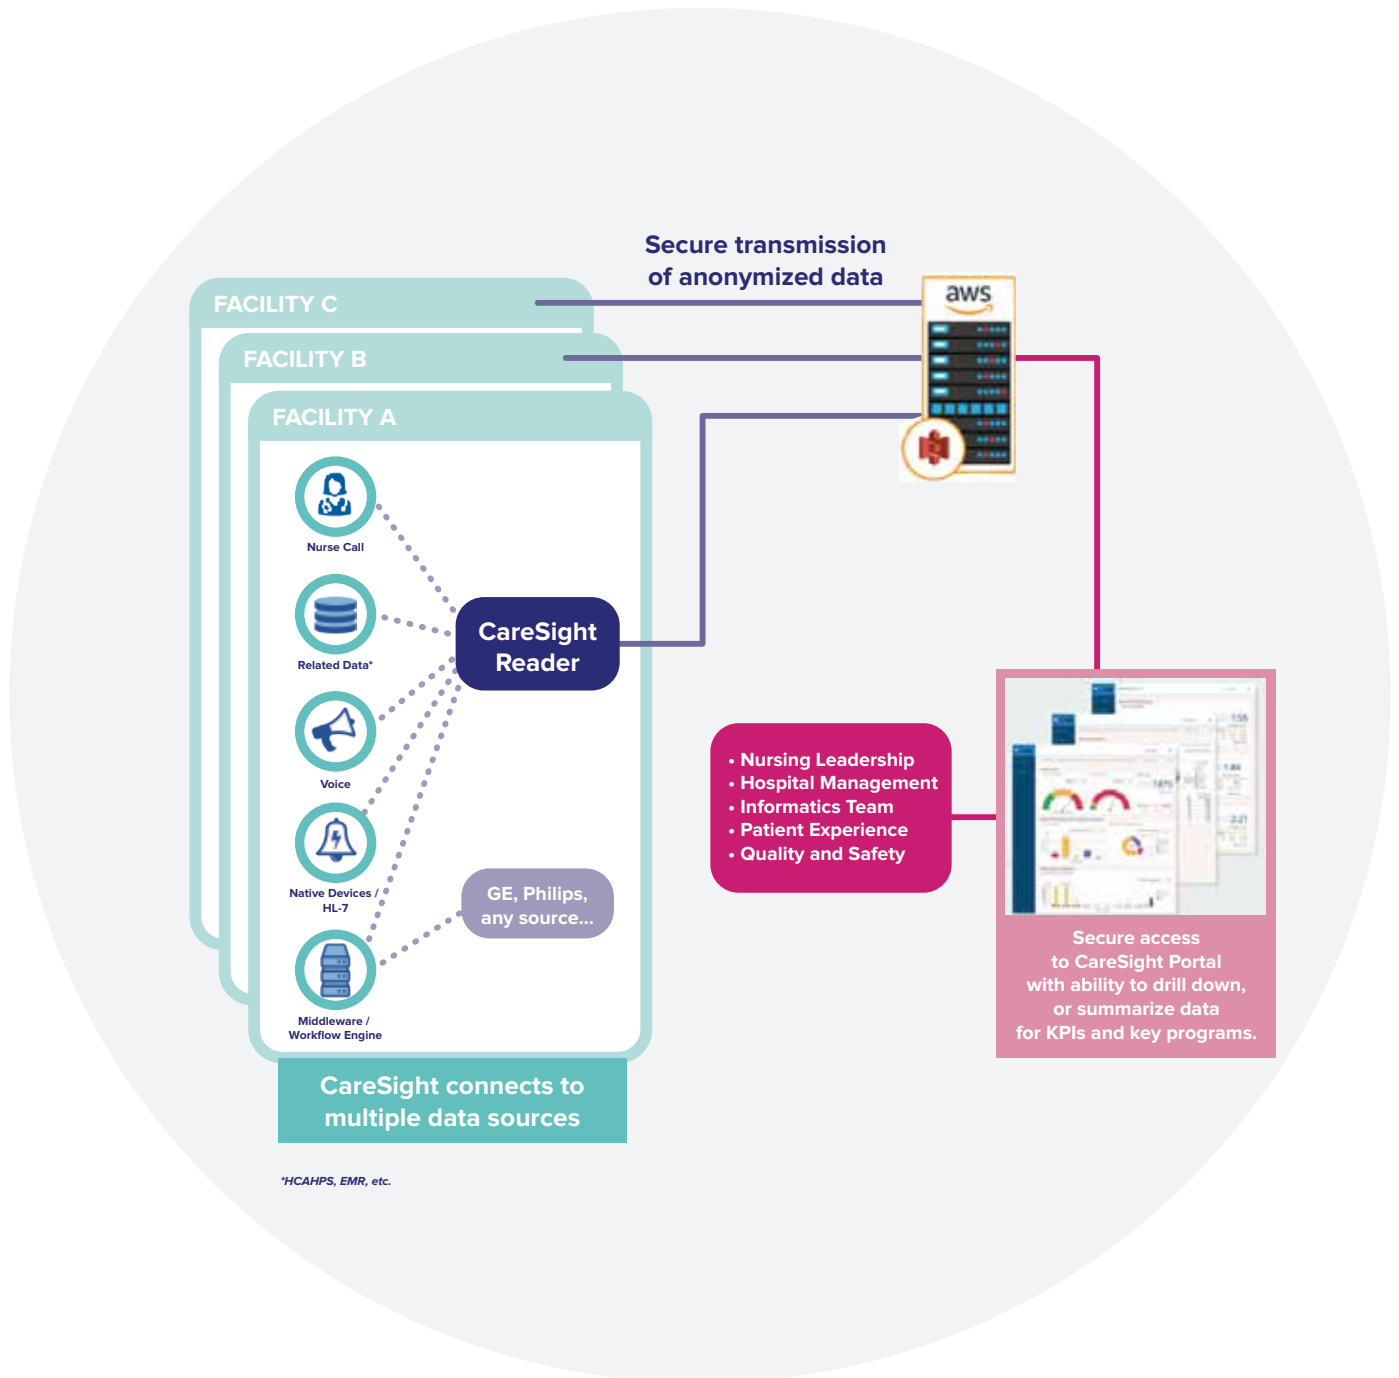

Comparative Modeling

Wondering how changes in staffing or workflow have impacted your hospital? CareSight's simple interactive tools allow you to choose "before and after" scenarios to easily understand the impact of those changes.

Graphical interface with ability to drill down for greater detail

A Multi-Source Integrated Analytics Solution

CareSight Portal

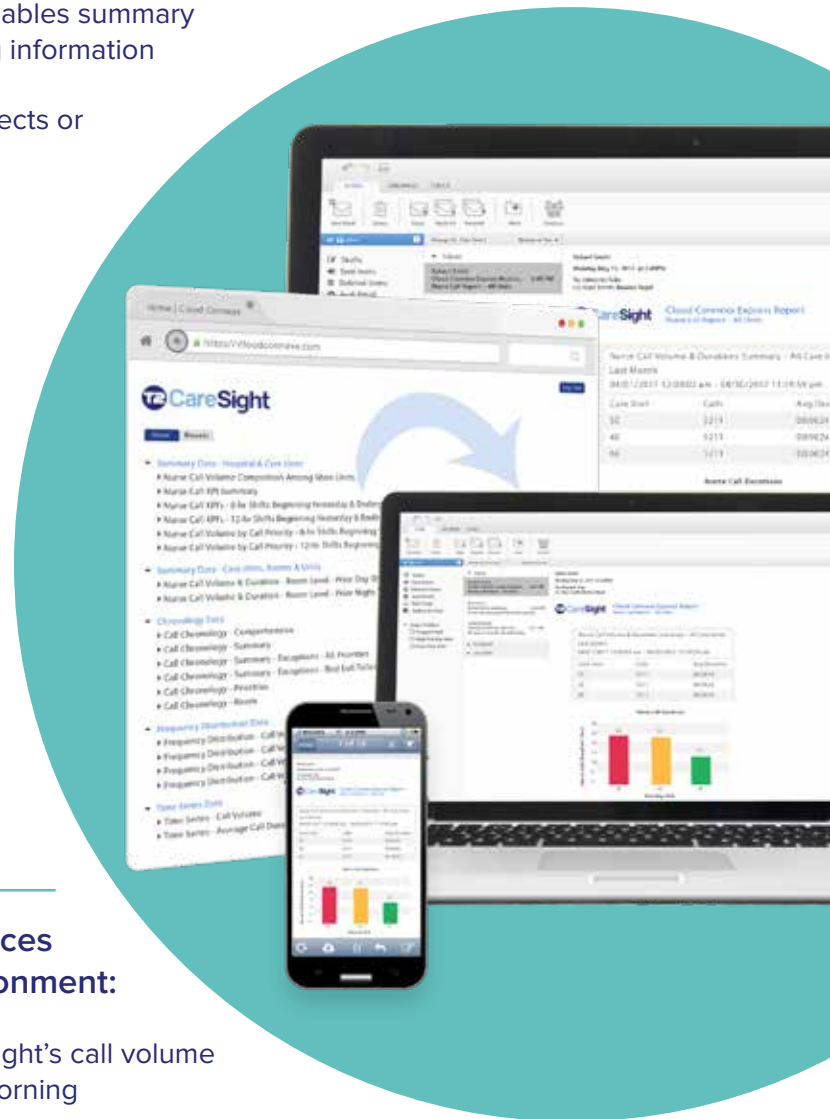

CareSight provides an analytics department “in a box”, offering support on demand and guidance on best practices:

- Quick and simple interactive, multi-tab portal that enables summary or drill-down data on nurse call or patient monitoring information
- Continuous performance updates on initiatives, projects or Key Performance Indicators (KPIs)
- Comprehensive filtering and drill-down capabilities to isolate activity or perform forensic discovery
- CareSight Portal can help to optimize workflow, improve patient care, and maximize team efficiency
- Side-by-side comparative modeling

CareSight Express

CareSight aggregates data from multiple sources to provide a comprehensive view of the environment:

- Stay informed on recent activity (for example: Last night’s call volume or chronology (by room) available first thing in the morning
- Automatically emails are automatically sent to nursing managers, clinical directors or staff
- Generates daily, weekly or monthly reports based on an evolved set of best practices.
- Gain actionable insight into alarm activity with over 20 reports
- Track KPI’s with easy to read charts

CareSight is a Managed Service

We bring a team with our technology to deliver Patient Care Analytics-as-a-Service.

Our approach results in more efficient operations and better patient care, based on a comprehensive view of your alarm-alert environment.

Assessment

Technology and Operations

- Identify the systems in place
- Document organization, roles, workflow and alarm data
- Understand goals/objectives/KPIs to be achieved
- Provide preliminary portal design input to engineering team

Our team of clinical workflow specialists works with you to clarify the technology and organizational elements so the mission is aligned with your objectives.

Integration

Secure Connection Data Normalization

- Install appropriate agents and hardware for secure transfer
- Configure security elements
- Extract and mask content
- Transform/normalize data sets

CareSight's Security and IT Integration team connects your systems to cloud infrastructure and securely transmit data.

Bring-up

Initiate and transfer to customer

- Configure Portal and dashboards
- Build report templates
- Adapt presentation for roles and KPIs
- Introduce and transfer ownership
- Train key individuals

We ensure your comfort with the CareSight product with final tuning, turn-over, and training for your team — so you can maximize your results.

Operations and Support

Secure Connection Established

- Support hotline calls
- Ongoing alarm reviews
- Consultation on support for initiatives
- Continuous input on best practices

As a service, we share innovative approaches and make sure your team has the right data at hand to support new initiatives.

Ongoing Maintenance

- 24 x 7 monitoring
- Remote database management
- Software updates

We monitor your system to fix any issues (before they are noticed by your team) and keep the system secure and fully up to date.
